Engineering & Scientific Consulting

David Schoen, Ph.D., P.E.

Principal Engineer | Materials and Corrosion Engineering
Menlo Park
+1-650-688-7110 | DSchoen@exponent.com

Professional Profile

Dr. Schoen has 8 years of research experience in issues relating to the failure analysis, fabrication, processing, and characterization of consumer electronic devices and components. He has experience with a variety of mechanical, chemical, optical, and electronic failure modes exhibited by electronic and optical materials, including fracture, corrosion, optical defects, and electronic failures.

Of particular interest to Dr. Schoen are the material origins of optical and electronic behavior, and how certain damage events can leave material evidence behind.

Dr. Schoen's materials characterization experience extends to transmission and scanning electron microscopy (SEM, TEM, STEM), auger electron, energy dispersive, and electron spectroscopies (AES, EDS, EELS), and diffraction, with a focus on analysis and identification of composition, phase identification, and microstructure.

Dr. Schoen completed his postdoctoral and graduate work at Stanford University in the research groups of Professors Yi Cui and Mark Brongersma. His work focused on the fabrication, phase behavior, and chemically and electrically-induced transformations in a variety of compound semiconductor nanowire devices, particularly for applications in nonvolatile memory and photovoltaics. During this time he developed several novel nanoscale devices, as well as an investigative strategy centered around the in-situ examination nanoscale devices during operation in the transmission electron microscope. Dr. Schoen's postdoctoral work focused on the application of nanoscale metal leads for optical applications, especially in the area of sources, detectors, and routers of surface plasmon polaritons (SPPs) on noble metal nanowires.

Teaching has been another important component of Dr. Schoen's scientific experience. In addition to providing training and assistance for electron microscopy users to the larger Stanford Engineering community for 2 years during his Ph.D., he has served as a teaching assistant for Introduction to Solid State Chemistry during his bachelor's work at MIT, and more recently as a lecturer for Stanford's Thin Film and Interface Microanalysis course along with Professor Mark Brongersma.

Academic Credentials & Professional Honors

Ph.D., Materials Science and Engineering, Stanford University, 2010

M.S., Materials Science and Engineering, Stanford University, 2008

B.S., Materials Science and Engineering, Massachusetts Institute of Technology (MIT), 2005

National Defense Science and Engineering Graduate Fellowship, 2005-2008

National Science Foundation Graduate Research Fellowship, 2009-2010 (awarded 2005)

Prior Experience

Post-Doctoral Researcher, Materials Science and Engineering Department, Stanford University, 2010-2013

Patents

Patent application– Water Sterilization Devices Including Nanostructures and Uses Thereof Inventors: Schoen DT, Schoen AP, Hu L, S.C. Heilshorn, Cui Y.
