Whether we are working as part of the client team, providing high quality expertise not available in-house, or providing additional resource at times of work overload, the Exponent team can:

- Perform data gap analyses on your current efficacy data set (identifying potential gaps and providing possible solutions) based on in-depth knowledge of the regulatory requirements.
- Prepare BPR efficacy dossiers to support active substance and product authorisations to appropriate formats, including IUCLID5.
- Assist in designing efficacy testing programmes including test protocols, using relevant guidance/methodologies (i.e., TNsG, EN, ASTM, OPPTS, FAO, WHO & OECD) to fulfil data requirements.
- Manage efficacy testing programmes (including advising on study placement, study monitoring, reviewing reports, and assessing and collating data).
- Provide assistance in representing your needs in meetings with regulatory authorities.
- Assist in drafting product labels.
- Assist with new regulatory requirements (e.g., Comparative Risk Assessment).
- Provide training on all aspects of biocide efficacy.
- Provide expert advice on all aspects of biocide efficacy.

The Efficacy Team

Our Efficacy Team has many years of practical experience in testing and evaluating biocides belonging to nearly all the product types, including: Rodenticides, Insecticides and Acaricides, Repellents and Attractants, Molluscicides, Disinfectants, Preservatives, and Anti-fouling Products.

We have considerable experience writing EU regulatory dossiers, working in EU expert groups (e.g., EPPO, TNsG) harmonising efficacy data requirements and assisting in the production of efficacy guidance documents. The team is highly experienced in using IUCLID5 to summarise biocide product efficacy study data for submission to ECHA. We can also produce comprehensive comparative risk assessments.

About Exponent International Ltd.

We are a highly skilled scientific and regulatory consultancy. Our Centre for Chemical Regulation and Food Safety has over 90 staff based in the UK, Switzerland, Spain, Italy, and the USA. Many of our consultants have worked in industry, contract laboratories, or as government regulators. Our expertise in all technical aspects relating to the regulation of biocides, pesticides, and industrial chemicals gives us unrivalled experience in solving complex technical and regulatory problems.
