**Aaron Freidenberg, Ph.D., P.E.**

Managing Engineer | Civil and Structural Engineering  
Seattle  
+1-425-519-8706 | [afreidenberg@exponent.com](mailto:afreidenberg@exponent.com)

## Professional Profile

Dr. Freidenberg specializes in root cause failure analysis and structural forensics. He has investigated the quality of the design and construction of structures whose performance did not meet expectations, including investigation of the nature and scope of structural damage resulting from blast, impact, earthquake, wind, fatigue, fire, snow, and construction loads. His past investigations include evaluation of structural damage to residential structures, structural failures of high-rise curtain walls, and collapses of vehicular bridges.

Dr. Freidenberg employs state-of-the-art engineering analysis and investigative techniques, including high-fidelity finite element analysis modeling. He has developed and published some of these investigative techniques on failure analyses of timber, concrete, and steel structures. Dr. Freidenberg also has expertise in dispute resolution, including domestic and international arbitration disputes in the energy and transportation sectors.

Prior to joining Exponent, Dr. Freidenberg was an Assistant Professor in the Department of Civil and Mechanical Engineering at the U.S. Military Academy in West Point, NY, where he taught a variety of mechanics courses and also served as Associate Director for the Center for Innovation and Engineering where he developed partnerships with other researchers.

## Academic Credentials & Professional Honors

Ph.D., Structural Engineering, University of California, San Diego, 2013

M.S., Civil Engineering, Princeton University, 2009

B.S., Civil Engineering, University of Southern California, 2007

## Licenses and Certifications

Professional Engineer Civil, California, #92528

Professional Engineer Civil, New Mexico, #30426

Professional Engineer Civil, Washington, #22009464

California CalSAFE SAP (Safety Assessment Program) Evaluator Certified

Washington WASafe BSE (Building Safety Evaluator) Certified

## Academic Appointments

Assistant Professor, U.S. Military Academy, West Point, 2014-2019

Visiting Assistant Professor, Manhattan College, 2013-2014

## Professional Affiliations

American Institute of Steel Construction (AISC)

Precast Concrete Institute (PCI)

Reviewer, Taylor & Francis, ASCE, Sage Journals

## Project Experience

### Collapse & Damage Investigations

- **Concrete Structures**

- *Townhouses (SE Asia)*: Investigated structural damage in hundreds of units caused by ground heave. Documented field conditions and performed finite element and structural analyses of moment frames, shear walls, and slabs to verify root causes and recommend repairs.
- *Viaduct Collapse*: Analyzed corbel failure during construction using advanced finite element modeling to identify design and/or construction deficiencies.

- *Various Structures*: Determined causes of damage to reinforced and prestressed concrete systems from a variety of mechanisms, including excessive service deflection, blast/impact, buckling/instability, soil buoyancy and surcharge, and fire exposure.

- **Steel Structures**

- *Gymnasium Roof Collapse*: Investigated truss failure through detailed analysis of members and welds; identified design and/or construction defects.
- *Lattice Towers*: Analyzed damage to snow-loaded towers to identify design and/or construction defects.
- *Pedestrian Bridge/Conveyor*: Determined cause of collapse due to bolt fatigue through site documentation and high-fidelity modeling.
- *Falsework/Shoring Failures*: Conducted advanced analysis of temporary steel works, including a buckling failure leading to falsework collapse underneath a skew bridge.
- *Various Structures*: Performed failure investigations on a wide range of structures, including heavy and slender plate girders, pre-engineered metal building systems, cold-formed light gauge steel walls, expansion joints, military vehicle underbody structures, grain silo hoppers, and poles/masts.

- **Wood Structures**

- *Bridges and Roofs*: Assessed damage to wood/glulam systems caused by deep checks, rot, and cross-grain tension.
- *Residential Buildings*: Investigated failures in houses across California and Washington related to explosions, vehicle/tree impacts, water intrusion, ground movement, wind, and fire.

### **Major Design Disputes**

- Evaluated design and construction cost overruns for major infrastructure and energy projects across the U.S. and Middle East. Projects included hospitals, power plants, petrochemical and storage facilities, highways, and transit stations.
