**Amory Martin, Ph.D., P.E.**

Managing Engineer | Civil and Structural Engineering  
New York  
+1-212-895-8147 | [amartin@exponent.com](mailto:amartin@exponent.com)

## Professional Profile

Dr. Martin specializes in investigating structural failures, design and construction issues, disaster risk management, and earthquake engineering. He has experience in dynamic analysis of complex structural systems subject to extreme loads and design of innovative seismic protective systems. As a consultant, Dr. Martin has served on projects involving structural collapse, seismic performance of highway bridges, multi-hazard risk analysis, and construction defects and code compliance issues of high-rise buildings.

His expertise includes performance evaluation of steel and concrete structures, structural optimization, and data-driven techniques related to seismic risk analysis. Dr. Martin developed seismic capacity design methods for steel rocking braced frames and validated them through nonlinear response history analysis. He invented structural topology optimization algorithms for buildings under seismic excitation and implemented the procedure for large-scale 3D structures using high-performance computing. He also formulated optimization algorithms for nonlinear dampers of multi-level stacked rocking systems.

Dr. Martin is an adjunct professor at New York University, where he teaches a graduate course on structural dynamics. Prior to joining Exponent, Dr. Martin worked as a consultant for the World Bank in disaster economics and risk management, specifically on the economic impact of COVID-19.

## Academic Credentials & Professional Honors

Ph.D., Civil and Environmental Engineering, Stanford University, 2020

M.S., Civil and Environmental Engineering, Stanford University, 2016

B.S., Civil Engineering, Johns Hopkins University, 2014

B.S., Mathematics, Johns Hopkins University, 2014

Achievement Rewards for College Scientists Fellowship, 2018

National Science Foundation Graduate Research Fellowship, 2015-2018

Stanford School of Engineering Fellowship, 2014

Johns Hopkins Civil Engineering Award, 2014

Tau Beta Pi Engineering Honor Society, 2014

## Licenses and Certifications

Professional Engineer, New Jersey, #24GE05999800

Professional Engineer, New York, #108748

Safety Assessment Evaluator (CA)

## Academic Appointments

Adjunct Professor, New York University, Tandon School of Engineering, 2023 - present

## Prior Experience

Consultant, World Bank, Disaster Risk Management Economics, 2020

Engineer Intern, Thornton Tomasetti, New York, 2015

## Professional Affiliations

American Society of Civil Engineers (ASCE), member

Earthquake Engineering Research Institute (EERI), member

Structural Engineers Association of New York (SEAoNY), member

Structural Engineering Institute (SEI), Optimal Structural Design committee member

## Languages

French (France)

## Patents

US Patent 9,132, 016: Implantable Shoulder Prostheses, September 2015 (Flaherty J.C., Fenton P.V., Martin A.)

Martin A, Chang CM. "Near-Collapse Performance of Existing RC Building through Small-Scale Hybrid Testing", Quake Summit Poster Session, NEES Annual Meeting, Reno NV, Aug 2013.

## Project Experience

### International Arbitration

- Seismic Design of Concrete Bridges: Evaluated the seismic design and code compliance of a series of concrete bridges as part of a highway network through structural analysis with soil-structure interaction of concrete piles. Assisted the appointed expert in the joint expert conferral process.
- Seismic Isolation of Multi-Span Concrete Bridges: Examined the performance of a series of seismically isolated multi-span concrete bridges through both linear and nonlinear analyses. Advised counsel on key structural engineering issues and review of opposing expert reports.

### Multi-Hazard Risk Analysis

- Utility Structural Assets: Developed time-dependent fragility functions for structural assets considering multiple hazards, degradation of the assets, and climate change for a large utility company.

### Design and Construction Disputes

- Mid-Rise Concrete Building: Project manager for an evaluation of the seismic design of the superstructure and foundations of a mid-rise building with concrete shear walls.
- High-Rise Residential: Analyzed vertical slab offsets in a high-rise concrete building through survey data analysis, structural analysis of the gravity system of key floors, and examination of construction procedures including shoring, reshoring, and concrete strength gain.

- High-Rise Residential: Determined the likely cause of the out-of-plumbness of a high-rise concrete building through review of survey data and building tolerance specifications. Co-wrote an expert report on our findings.

## **Structural Failures**

- High-Rise Hotel Collapse: Investigated the collapse of a high-rise steel hotel building during construction through structural analysis of the gravity system of several key floors. Inspected evidence at the collapse site, selected key pieces for further examination, and developed a testing protocol.
- Bridge Collapse: Conducted site visits and documented observed conditions shortly after the collapse of a large-span steel bridge.
- Garage Collapse: Managed daily site visits at the collapse site of a steel and concrete garage. Documented evidence during emergency demolition and coordinated with local authorities and other involved parties for tagging, evidence gathering, and experimental testing (on-site and off-site). Co-authored an expert report on the cause of the partial collapse.
- Garage Demolition Collapse: Inspected site conditions and evidence after the collapse of a reinforced concrete garage during demolition. Coordinated with other parties for evidence gathering and testing.
