

## Mary Murphy, R.D.

Office Director and Principal | Chemical Regulation and Food Safety  
Washington DC  
+1-202-772-4953 | mmurphy@exponent.com

### Professional Profile

Ms. Murphy, a registered dietitian with over 20 years of experience as a consultant in the areas of dietary intake assessments, evaluation of the safety and efficacy of food ingredients and dietary supplements, and critical reviews of nutrition science information. She analyzes national dietary data to identify food consumption patterns, assess nutrient intake adequacy and diet quality, examine relationships between food and nutrient intakes and health measures, and model the nutritional impact of various fortification scenarios or other potential modifications to the diet.

Ms. Murphy has designed and completed numerous dietary exposure assessments using nationwide food consumption data from the United States such as the National Health and Nutrition Examination Survey (NHANES) data as well as other nationally representative datasets including data for the United Kingdom, Brazil, and China; for some analyses Ms. Murphy has developed custom databases of food constituents. Findings from these analyses have been published in the peer-reviewed literature and have been used to support product development efforts, marketing initiatives, product registration, and proposed changes in food labeling and dietary guidance.

Ms. Murphy also has extensive experience in evaluating the safety and efficacy of novel ingredients added to foods, medical foods, infant formula, and dietary supplements. Ms. Murphy has developed GRAS dossiers and other safety assessments for food additives such as prebiotics, phytonutrients, fatty acids, and proteins, and has convened Expert Review panels. Ms. Murphy has developed claims substantiation dossiers for structure-function claims on foods and dietary supplements. Ms. Murphy also has conducted numerous critical reviews on a variety of nutrition topics, including systematic reviews and meta-analyses; these reviews have been summarized as white papers, peer-reviewed papers, and components of regulatory submissions.

### Academic Credentials & Professional Honors

M.S., Nutrition, University of Minnesota, 1997

B.A., Physics, College of St. Benedict, 1989

### Professional Affiliations

Academy of Nutrition and Dietetics (member)

Institute of Food Technologists (professional member)

American Society for Nutrition (member)

## Project Experience

Identified sources of fortification in foods reported consumed in NHANES and modeled the impact of proposed revisions to the Daily Values on adequacy of nutrient intake and the potential for excessive nutrient intake assuming that the percent of the Daily Value for select fortification nutrients remained constant across each of four scenarios. Results of this study were published in the peer-reviewed, scientific literature.

In two projects, developed estimates of phytonutrients in the United States and globally using available nutrient composition and food consumption data. Data generated in these projects were published in the peer-reviewed, scientific literature and findings were used in public relations campaigns to raise awareness of phytonutrient intakes.

Compared nutrient intakes and body measures among children and teenagers drinking flavored milk, exclusively plain milk, or no milk. This dietary intake assessment was completed with NHANES data and the results of the study were published in the peer-reviewed, scientific literature.

Developed a database of typical resistant starch concentrations in foods and in combination with food consumption data reported in NHANES, estimated ranges of resistant starch consumed in the U.S. by age and sex, and race/ethnicity. The relative proportions of resistant starch intakes from ten categories of foods were estimated for the total population and by race/ethnicity. Results of this study were published in the peer-reviewed, scientific literature.

Estimated nutrient intakes from beverages in the United States, and also compared intake of selected nutrients among subpopulations by patterns of beverage consumption. The analysis used data reported in NHANES and was limited to a sample population with plausible dietary recalls. A report was developed to accompany the research, and the results were used in a marketing campaign by a trade association.

Modeled the effects of various levels of nutrient fortification on nutrient intakes for several clients. One project involved assessment of nutrient intakes assuming different levels of whole grain substitution for refined grains in a variety of food categories.

Analyzed data detailing food and nutrient intakes by children to help identify patterns of consumption and potential nutrient inadequacies.

Developed exposure assessments for use in safety assessments related to food additives, potential

contamination, and Prop 65 issues.

Completed safety assessments, prepared GRAS dossiers, and facilitated Expert Panel reviews for the use of prebiotics in food and infant formula; also developed GRAS dossiers for the use of nutritional substances such as carotenoids, fatty acids, and proteins in foods.

Developed gap assessments to identify data needs necessary to fill prior to development of a GRAS dossier.
