Engineering & Scientific Consulting

Susan Kane Driscoll, Ph.D.

Senior Managing Scientist | Ecological and Biological Sciences
Burlington
+1-978-461-4606 | sdriscoll@exponent.com

Professional Profile

Dr. Kane Driscoll is an aquatic toxicologist with over 30 years of experience in the application of risk assessment methods for evaluating the potential effects of environmental stressors. She specializes in exposure modeling and toxicity of contaminants, including metals, hydrocarbons associated with oil and gas, and persistent compounds such as polychlorinated biphenyls (PCBs).

Dr. Kane Driscoll has directed numerous risk assessments for a variety of industrial, utility, and governmental clients. She has extensive experience designing and conducting laboratory and field studies to support the development of technically defensible solutions to environmental problems. She has worked on projects related to oil spills, industrial releases, and injuries to aquatic and terrestrial resources. Dr. Kane Driscoll has conducted expert reviews for various industrial clients and trade associations related to claims of environmental fate and effects of commercial products, including various plastics and pavement coatings.

Dr. Kane Driscoll is a specialist in the field of sediment toxicology, and her original research and publications in the areas of bioavailability and toxicity of sediment-associated contaminants are widely cited. She has extensive knowledge of the technical basis and predictive ability of various sediment quality benchmarks and has co-authored guidance documents on emerging methods for assessing the potential exposure and toxicity of polycyclic aromatic hydrocarbons (PAHs) and other organic contaminants.

Academic Credentials & Professional Honors

Ph.D., Environmental Sciences, University of Massachusetts, Boston, 1994

B.S., Natural Resources, University of Rhode Island, 1981

Recognized in 2018 by the Society of Environmental Toxicology and Chemistry for a highly cited paper, “Microplastics as vectors for bioaccumulation of hydrophobic organic chemicals in the marine environment: A State-of-the-Science review,” which garnered the most downloads from that journal in the 12-month period from its date of publication.

Integrated Risk Assessment Paper of the Year for 2002 for “A Comparative Screening-Level Ecological and Human Risk Assessment for Dredged Material Management Alternatives in New York/New Jersey Harbor,” in the journal, Human and Ecological Risk Assessment.

Prior Experience

Senior Managing Scientist, Menzie-Cura & Assoc., Inc., 1997-2006

Post-Doctoral Research Scientist, Bioavailability and Toxicity of Sediment-Associated Organic Contaminants, Virginia Institute of Marine Science, 1996-1997

Post-Doctoral Research Scientist, Bioavailability and Critical Body Burdens of Sediment-Associated PAHs, National Oceanic and Atmospheric Administration Great Lakes Environmental Laboratory, 1994-1996

Professional Affiliations

Society of Environmental Toxicology and Chemistry (member, editorial reviewer and former member of the Board of Directors for the North American Chapter)

Project Experience

Dr. Kane Driscoll has been involved in numerous projects relating to analysis of potential exposure and risk to humans and ecological resources.

Natural Resource Damage Assessment

Provided analysis and technical support for the Deepwater Horizon NRDA in the Gulf of Mexico. Implemented the use of the Target Lipid Model to assess potential injury to aquatic organisms from exposure to PAHs and other contaminants in oil and dispersants. Participated in a review of a major NRDA case at the Bayway and Bayonne petroleum refinery in New Jersey, USA. Examined use of sediment and soil screening benchmarks to assess damage to ecological receptors.

Industrial Clients and Trade Associations

Private Client. Reviewed the scientific literature on the potential toxicity of floral foam microplastics as well as leachates from floral foam and other plastics on aquatic organisms. Prepared a white paper and summarized uncertainties related to the comparison of effects observed in laboratory studies to field conditions.

American Chemistry Council – Plastics Division: Did a state-of-the-science review on the potential for microplastics in the ocean to sorb contaminants (e.g., PCBs) from the environment, and the potential for exposure and effects on aquatic organisms, wildlife, and humans.

Pavement Coatings Technology Council: Reviewed literature on the potential for runoff of refined coal tar pavement coatings to cause toxicity to aquatic organisms.

Personal Care Products Council: Prepared a white paper on the fate of personal care product polymers in wastewater treatment plants.

Guidance Documents

Co-author of a guidance document for the U.S. Environmental Protection Agency and the U.S. Department of Defense on the use of passive samplers at contaminated sediment sites.

Revised EPA guidance on the development of site-specific Equilibrium Partitioning Sediment Benchmarks (ESBs) for PAHs that consider reduced partitioning and bioavailability of organic contaminants.

Lead a technical team in the revision of “Standard Guide for Determination of the Bioaccumulation of Sediment-Associated Contaminants by Benthic Invertebrates” (ASTM International E1688-00a).

Conducted a technical review for Environmental Professionals of Connecticut (EPOC) of the Connecticut Department of Environmental Protection’s proposed changes to Connecticut water quality standards.

Conducted research for the Electric Power Research Institute and its utility members on the application of the EPA equilibrium partitioning sediment benchmarks for PAH mixtures to contaminated sediments at manufactured gas plant (MGP) sites. Research examined influence of various forms of “black carbon,” including coal tars and coke, on reducing bioavailability and toxicity of PAHs in sediment to aquatic organisms.

Oil Spills

Deepwater Horizon: Analyzed data for hundreds of laboratory toxicity tests on the effects of various preparations of oil, with and without dispersants. Technical reviewer of associated publications.

Exxon Valdez: Conducted a comprehensive review of literature on the toxicity of oil to aquatic wildlife. Developed toxicity reference values for oil based on various approaches, including use of surrogate compounds for oil fractions.

Superfund

Conducted effects assessment for the Hudson River Baseline Ecological Risk Assessment. Reviewed literature on effects of PCBs and dioxin-like compounds on fish and aquatic wildlife. Selected toxicity reference values for use in ecological risk assessment.

Technical consultant for an industrial client at the Berry's Creek Study Area Superfund site in New Jersey, USA. Project manager for a field pilot study on the use of activated carbon to reduce bioavailability of mercury and PCBs in marsh sediments. Co-developer of a risk-based method for cost allocation among responsible parties.

Technical reviewer of human health and ecological risk assessments for exposure to mercury at the Nyanza Superfund Site Operable Unit 4 - Sudbury River in Massachusetts. Project manager for field effort that used passive samplers to demonstrate reduced concentrations and bioavailability of hexavalent chromium in sediment pore water of the Hackensack River, New Jersey.

Risk Assessment and Remedial Investigations

Managed an ecological and human health risk assessment for a former automobile battery manufacturing site in Connecticut. Characterized potential exposure of human and ecological receptors to lead in surficial sediments of a tidal river. Designed field-sampling program and used site-specific exposure information to back-calculate health-protective concentrations of lead in sediment.

Managed a large field demonstration project for the Department of Defense using activated carbon to reduce bioavailability of PCBs and methyl mercury in sediments. Managed a review of the long-term trends in fish and shellfish monitoring data for the Massachusetts Water Resources Authority. Conducted a before-after-control-impact (BACI) statistical analyses to examine impacts from relocation of the treatment plant outfall.

Project manager for a net environmental benefit analysis (NEBA) to evaluate the costs and benefits of remediation options for a lead contaminated river.

Managed an extensive review of the available information on the toxicity of dioxin-like compounds to birds. Compiled a database of dose-response relationships that was used to develop a species sensitivity distribution for effects to avian species.

Prepared a technical review for EPA and the U.S. Army Corps of Engineers on approaches used to characterize the toxicity of mixtures of organic contaminants to fish.

Developed a comparative risk assessment framework for the U.S. Army Corps of Engineers that identifies characteristics of various placement and treatment alternatives for dredged materials that contribute to potential environmental risk.

Examined environmental impacts associated with the release of a plume of high pH groundwater from an industrial landfill. Assisted in the development of a sampling program to demonstrate that high pH groundwater was not mobilizing naturally occurring metals in soil.

Managed an ecological risk assessment for dioxin-contaminated soil associated with incinerator waste on the grounds of a former hospital in Washington, DC.

Managed an ecological and human health risk assessment for a RCRA site in Taunton, Massachusetts, USA. Designed extensive sampling and sediment toxicity testing program that demonstrated minimal impact to aquatic organisms and wildlife from exposure to PCBs, mercury, and dichlorobenzenes in surficial sediments.

Developing a novel approach for EPA and the U.S. Army Corps of Engineers to assess the toxic effects of dietary and water-borne doses of PAHs to fish. Reviewed literature, summarized data, developed a cumulative distribution of doses, and estimated protective dose levels.

Manufactured Gas Plant Sites

Coordinated the development of receiver operating characteristic (ROC) curve analyses to assess the relationship between concentrations of PAHs in sediment and toxicity for three MGP sites in Wisconsin.

Advisory Appointments

Select Advisory Activities

Gulf of Mexico Research Initiative. Invited to participate in an effort to synthesize knowledge learned about preparation of crude oil for toxicity testing since the Deepwater Horizon oil spill. Issues to be considered will include physical fate and natural processes related to petroleum releases, including evaporation, sea-air transfer, dissolution, sorption-desorption, deposition. Will also evaluate the various procedures for preparation of water accommodated fractions (WAFS) and chemically enhanced water accommodated fractions (CEWAFS), and issues related to the comparability of WAF and CEWAF experiments and field conditions.

Sediment Management Workgroup. Invited to lead and participate in various workshops related to assessment and management of contaminated sediment, including methods for defining reference and background conditions, as exposure modeling for fish.

SETAC-Sponsored Technical Workshop. Steering committee member and invited participant in “Guidance on Bioavailability/Bioaccessibility Measurements using Passive Sampling Devices (PSDs) and Partitioning-Based Approaches for Management of Contaminated Sediments” Cosa Mesa, CA. November 2012.

SETAC-Sponsored Technical Workshop. Invited participant in “The Tissue Residue Approach for Toxicity Assessment: Invertebrates and Fish” Leavenworth, WA, June 7–12 2007.

Deposition & Trial Testimony

Testified on two occasions before the Committee on Environment and Natural Resources of the Maine State Legislature regarding a proposed Act Concerning Pavement Sealing Products. Testified on behalf of the Pavement Coatings Technology Council regarding the potential for adverse effects of runoff from refined coal tar sealants to aquatic organisms.

Supported the preparation of expert and rebuttal reports for Foley Hoag in Ecuador v. Columbia International Court of Justice in relation to claims of cross-boundary impacts associated with the use of herbicides.
