Tom Kolibaba, Ph.D.

Scientist | Polymers & Chemistry
Denver
+1-303-802-3385 | tkolibaba@exponent.com

Professional Profile

Dr. Tom Kolibaba is a scientist specializing in polymer science, with emphasis on polymer processing, flame retardant coatings, and photopolymer additive manufacturing. He has extensive experience in developing functional materials for protective applications, including fire prevention and gas barrier coatings, and has contributed to the commercial implementation of novel material technologies.

Dr. Kolibaba's technical expertise spans monomer synthesis, purification, and polymerization techniques such as free radical, photopolymerization, and ring-opening metathesis polymerization (ROMP). His doctoral research focused on environmentally benign, water-based coatings for protective applications. He has developed flame retardant formulations for wood which resulted in a commercialized flame retardant coating.

In the area of additive manufacturing, Dr. Kolibaba has developed and optimized resin chemistries for vat photopolymerization 3D printing. His work includes the formulation of novel materials such as polyelectrolytes, hydrogels, and elastomers, as well as materials with specialized properties including flame resistance, scintillation, and high dielectric breakdown. He is experienced in diagnosing and improving printing reliability through analysis of 3D printer hardware—particularly light engines—and resin performance.

Dr. Kolibaba is proficient in a wide range of characterization techniques. His expertise includes small molecule analysis (e.g. UV-Vis, FTIR, NMR, GC-MS), polymer characterization (e.g. GPC, DMA, DSC, TGA), and advanced microscopy (e.g. SEM and multiple AFM modalities including contact mode, tapping mode, scanning Kelvin probe force microscopy, and conductive AFM). He has collaborated with academic institutions and government laboratories to advance material performance and reliability in demanding applications.

Academic Credentials & Professional Honors

Ph.D., Chemistry, Texas A&M University, 2021

B.S., Chemistry, Pacific Lutheran University, 2016

2023 MML Postdoctoral Fellow Accolade (NIST)

2022 Sustainability Award (RadTech)

Academic Appointments

Lecturer, Chemistry Department, University of Colorado Boulder, 2023-2024

Prior Experience

Research Chemist, National Institute for Standards and Technology, 2023-2025

National Research Council Postdoctoral Fellow, National Institute for Standards and Technology, 2021-2023

Professional Affiliations

2013-Present, American Chemical Society (POLY and PMSE Division membership)

Project Experience

Standards Leadership

Led two global interlaboratory studies while at the National Institute for Standards and Technology to standardize the working curve measurement in vat photopolymerization. Used data from these studies to develop a reference material to allow the field to validate their working curve measurements. This reference material was NIST's first (and to-date, only) reference material for additive manufacturing.

Novel Material Expertise

Trained Air Force Research Lab scientists in vat photopolymerization printing, assisted in optimization of printing parameters for polybutadiene-based 3D printing resin.

Commercial Impact

Led project to develop a flame retardant coating for a major plastic film company. Identified commercial material suppliers and optimized formulations to maintain high UL ratings for flame retardancy at minimal coat weight. Novel treatment outperforms previous industrial standard, coating commercially released Q4 of 2025.
