Exponent®
Engineering & Scientific Consulting

Trevor Lardinois, Ph.D., P.E., CFEI, CGE

Managing Engineer | Thermal Sciences
Warrenville
+1-630-658-7511 | tlardinois@exponent.com

Professional Profile

Dr. Lardinois applies the fundamentals of chemical engineering, chemistry, mechanical engineering, and material science to investigations and analyses of safety incidents or technical issues involving chemical/mechanical processes, fires/explosions, industrial and fuel gas equipment, formulations, and consumer products. Dr. Lardinois is an active member within the American Institute of Chemical Engineers (AIChE), National Association of Fire Investigators (NAFI), National Fire Protection Association (NFPA), and American Society of Gas Engineers (ASGE) by way of participation, publications, presentations, and conference organization. Examples of Dr. Lardinois' technical consulting work includes:

Fire and Explosion Sciences

Dr. Lardinois has extensive experience investigating incidents related to fires and explosions in various industry sectors, such as agriculture, hazardous waste, residential appliances/products, and industrial chemical/utility process plants. Dr. Lardinois applies the fundamentals of engineering principles, physics, and laws of science to investigate complex incidents, often relying on calculations, modeling, laboratory testing, standards, and regulations to evaluate evidence and test hypotheses. He has investigated fires, combustion explosions, mechanical overpressure explosions, and chemical releases in a variety of settings, ranging from residential to large industrial facilities. Dr. Lardinois developed expertise with self-heating and reactive chemical hazards evidenced by numerous technical projects, research, publications, and presentations, especially for fiber materials, reactive metals, vegetable oil-containing materials, adsorbent materials (e.g., carbon), and coatings. Additionally, he offers technical services in the fuel gas industry (natural gas, LP, and propane gas) as it relates to piping, connections, regulators, materials of construction, odor fade, burners, gas-fired appliances/boilers, and carbon monoxide poisoning. Dr. Lardinois has advised clients on forced failure analyses and fire risk evaluations for consumer products and appliances from a system level down to the component level.

Mechanical Systems, Processes, and Construction

Dr. Lardinois leads investigations related to mechanical systems and processes (residential and industrial) involving water losses, fuel gas systems and components, chemicals, and process plant construction. His expertise has been leveraged to support clients on projects related to Design-Bid-Build (DBB) and Engineering Procurement Construction (EPC). Specific examples include investigations of issues related to operations, maintenance, and management of large capital assets, such as turbines, generators, dryers, and hydroelectric pumps, with evaluations focused on the performance and installation against recommended and generally accepted good engineering practices (RAGAGEP), contractual specifications, Owner requirements, design/technical specifications, and/or regulatory requirements.

Emissions and Technologies

Another core area of Dr. Lardinois' technical consulting portfolio focuses on emissions and technologies for pollution abatement. His Ph.D. thesis work focused on automotive exhaust pollutant (NOx, COx) abatement systems and controls. This research expertise has been leveraged at Exponent to support a variety of other emission related projects, such as vehicle defeat devices, hazardous gas scrubbing/adsorption processes, carbon monoxide or flue gas releases, and decomposition of fluoropolymers (PFAS abatement). Dr. Lardinois has worked with clients to understand the failure mechanisms of problematic emission systems or formulations, and provided guidance on alternative technologies, formulations, and/or strategies to meet challenging contractual and regulatory requirements or lower risk.

Chemical Characterization, Kinetics, and Analytical Chemistry

Dr. Lardinois champions the area of chemical characterization, kinetics, and analytical chemistry. During his Ph.D. thesis, Dr. Lardinois developed novel, analytical characterization methods to address the fundamentals of complex chemicals and their formulations. He has published and presented detailed analyses of kinetics, catalyst deactivation, and catalyst regeneration to a wide variety of industries. These skills have been leveraged at Exponent to solve clients' challenges as it relates to contamination, performance, quality, and risks of a variety of formulations (catalysts, active pharmaceutical ingredients, adsorbent beds) and processes across many industries, such as pharmaceutical, automotive, hazardous waste, coatings, and chemical.

Path to Exponent

Dr. Lardinois received his B.S. in Chemical Engineering from the University of Wisconsin – Madison, where he researched the upgrading of biomass derived feed stocks to value-added chemicals. After a summer sojourn to the Technical University of Vienna in Austria, Dr. Lardinois started his Ph.D. studies at Purdue University. His dissertation focused on the influence of zeolite material properties and external gas conditions on the thermodynamics and kinetics of metal structural interconversion for the abatement of NOx pollution from automotive engine exhaust. Throughout his Ph.D. studies, Dr. Lardinois worked with many advanced catalyst/material characterization instruments and frequently consulted with automotive companies.

Academic Credentials & Professional Honors

Ph.D., Chemical Engineering, Purdue University, 2021

B.S., Chemical and Biological Engineering, University of Wisconsin, Madison, 2016

Chemical Engineering Citation Award, Purdue University, 2023

Prof. K.C. Chao and Jiun Chao Graduate Education Endowment Grant, Purdue University, 2020

Outstanding Teaching Assistant Award (Heat and Mass Transfer), Purdue University, 2018

Ross Fellowship, Purdue University, 2016–2017

Melby Scholarship, University of Wisconsin – Madison, 2015

Gensler Scholarship, University of Wisconsin – Madison, 2015

Eugene and Patricia Kreger Herscher Scholarship, University of Wisconsin – Madison, 2014 & 2015

Engineering Great People Scholarship, University of Wisconsin – Madison, 2014

Licenses and Certifications

Professional Engineer, Illinois, #062075487

Professional Engineer, Iowa, #P30707

Professional Engineer Chemical, Minnesota, #63284

Professional Engineer, Wisconsin, #102200-6

40-Hour Hazardous Waste Operation and Emergency Response Certification (HAZWOPER)

Certified Gas Engineer (CGE)

Certified Fire and Explosion Investigator (CFEI)

Prior Experience

Quality and Assurance Intern, AbbVie, 2015

Professional Affiliations

American Institute of Chemical Engineers (AIChE)

• Session Chair – Midwest Regional Conference 2022-25, Catalysis, Reaction/Green Engineering, Process Safety

• Session Chair – Spring AIChE 2022, Fuels and Petrochemical Division, Catalysis Session

National Fire Protection Association (NFPA)

• Alternate Member: Technical Committee on Ovens and Furnaces, NFPA 86 Standard for Ovens and Furnaces

National Association of Fire Investigators (NAFI)

American Society of Gas Engineers (ASGE)

Project Experience

Fire and Explosion Sciences

· Spontaneous combustion and basket testing

· Self-heating of fibers, carbon materials, vegetable-derived oils, wood finishing products, metal fines

· Residential, commercial, and industrial fire/explosion investigation

· Corn/grain processing facilities and combustible dust

· Hot work incidents

· Leak testing of fuel gas systems and appliances

· Hospital fires involving oxygen enriched atmospheres and electrocautery

· Explosions, fires, and incidents caused by chemical reactivity hazards

· Fuel gas systems, components, and equipment in residential and industrial settings

· Flue or combustion gas releases (e.g., carbon monoxide poisoning)

Hazardous Waste Chemistry, Releases, and Management

· Chemical treatment of hazardous waste

· Representative sampling of hazardous waste

· Chemical releases (recent or historical), especially trichloroethylene (TCE)

· Unknown reactive chemistries and hazards

· Sulfur chemistry (H2S, SO2)

· Hazardous waste management and regulations for generators and TSDFs

Product Safety and Failures

· Aerosolized spray – slip and fall hazards, flammability testing following SOR/2001-269 Schedule 1 (Canada) and 16 CFR § 1500.45 (United States)

· AV carts – tipping (UL 1678)

· Blenders – motor locking, smoking

· Candles – flashing/flash over, container integrity, ASTM standards for fire safety, manufacturing, adhesion material compatibility

· Clothing storage tip-over – testing, ASTM F2057-23

· Electric Kettles – container integrity, burns

· Flame arresters – certification

· Heated massagers – skin burns, process parameters

· Laminators – safety features, smoking

· Shredders – smoking, locking motors

· Space Heaters – failures, melting

· Water heaters – control valves, thermal cutoffs, flame arrestors

Engineering and Construction

· Operations, equipment, maintenance, systems, capital assets management

· Engineering Procurement Construction, Design Bid Build, turn-key, engineering contracts

· Power and Utility Plants with steam turbines, supercritical boilers, hydroelectric pumps

· Piping support following MSS SP-58, ASME B31.1, ASME B31.3

Emissions and Vehicles

· Pollution abatement in mobile engine exhausts (especially SCR and NOx traps)

· 40 CFR Part 86

· Defeat devices

· Hazardous gas abatement and adsorption with packed beds

· Technologies for plastic decomposition and PFAS abatement

Chemical Characterization, Kinetics, and Analytical Chemistry

· Synthesis, characterization, and kinetics (especially zeolites) of catalysts and formulations

· Deactivation and regeneration of catalysts

· Chemical characterization of formulations and contaminants

· Technical requirements and compliance of chemical converting processes

· Experience with a suite of analytical chemistry equipment
